Jonas Beltoft

jonasb5@hotmail.dk

Analytical and ambitious software engineer, with over 4 years of experience developing software used by millions.

Work Experience

Jun 2026 – Present
Backend Software Engineer, *AirWallet*, Odense, Denmark
- Backend (semi fullstack) developer for the **SaaS** solution, in the **Google ecosystem**, with Angular frontend.
- I am a key part of the small team that comprises the whole development department. This means a high level of ownership and responsibility. Taking features all the way from idea, through refinement and to production (and onward).
- Designing data schemas and significantly optimizing existing solutions.
- Designing and extending **RESTful APIs** in the Google ecosystem, through **Cloud Run**. This includes queues, misc services, and deployment configuration.
- Integrating with **Stripe** and creating our own public API for customers to consume.
- Creating our own internal fiscalisation compliant system and integrating orders to that and other external fiscalisation systems.
- Built the data analysis base in **BigQuery** and the surrounding systems. Ensuring live data is turned into business insights.

Jan 2026 – Jun 2026
Software Developer, *Hesehus*, Odense, Denmark
- Backend developer on the team responsible for the **Matas webshop platform**, operating at scale within a high-traffic e-commerce environment.
- Developing and maintaining a large solution built with **ASP.NET MVC and Web API**, with independently deployed services in **Microsoft Azure**.
- Designing and extending **RESTful APIs** consumed by a React frontend, leveraging **Entity Framework Core** for data access and domain modeling.
- Integrating with both **in-house systems** (PIM, DAM, CMS) and **external services** including payment providers and content platforms.
- Driving real improvements in **performance, code quality, and maintainability** across a large production-grade .NET codebase.

Aug 2025 – Jan 2026
IT Consultant, *Netcompany*, Copenhagen, Denmark
- Developing **enterprise-scale** software solutions for private sector clients using modern **React and Java Spring Boot stacks with PostgreSQL**.
- Engaging in system architecture and **API design**, integration across **large distributed systems**.
- I was the main actor in designing the data structure and database design for the new upcoming Amplio Estate product.
- Acting as a technical consultant ensuring maintainable, secure, and performant solutions.
- Collaborating with senior architects to modernize legacy platforms and create new and better data solutions.

Oct 2024 – Jul 2025
Cybersecurity Engineer, *Umbraco*, Odense, Denmark
- Performed security audits, **penetration tests**, and code reviews for Umbraco CMS and Umbraco Cloud.
- Identified, tested, and remediated vulnerabilities across backend APIs, authentication logic, and infrastructure.
- Contributed to the design of future security architecture ensuring **CIA triad compliance**.
- Collaborated directly with developers and DevOps teams to implement secure coding practices and internal training.

Feb 2024 – Sep 2024
Software Developer, *Aris Robotics*, Odense, Denmark
- Solely responsible for designing and implementing the company's main product platform from the ground up.
- Integrated **hardware control, AI inference, and cloud synchronization** using **Angular, Firebase, and Node.js cloud functions**.
- **Architected modular frontend and backend components** to enable rapid prototyping and future scalability.
- Established internal development standards, **CI pipelines**, and data handling best practices.

These next two overlap, because I enjoyed the work and was limited on the time allowed per week.

Aug 2022 – Jan 2024 **Software Developer (Student)**, *GF Forsikring*, Odense, Denmark

- Designed and implemented an internal documentation and visualization system using JavaScript, .NET, and SQL.
- **Automated internal processes** for tracking and documenting API integrations.
- Collaborated in an agile team, maintaining high code quality and reliability.
- Gained practical experience in enterprise-level .NET development and secure data handling.

Jun 2022 – Jan 2024 **Full-Stack Developer (Student)**, *Eurisco*, Odense, Denmark

- Designed and developed a **full-stack data collection and processing system** for industrial IoT setups.
- Implemented backend **microservices in Go** for data ingestion, aggregation, and analysis.
- Built an Angular-based frontend dashboard for visualization and system management.
- **Developed a custom RBAC (Resource-Based Access Control) middleware** ensuring fine-grained authorization.
- **Led a team of 3** other student workers, ensuring their understanding and development of the system.

2020 -2021 **Miscellaneous consultant work**, *Private*, Odense, Denmark

Before I got an official software job, I developed solutions for people who needed it, both backend, frontend and embedded systems.

Aug 2020 – Feb 2021 **Conscripted Soldier (Squad Leader)**, *Jydske Dragonregiment*, Holstebro, Denmark

Led a squad of 10 soldiers, honing leadership, collaboration, and decision-making skills under pressure.

2013 – 2020 **Miscellaneous youth work**, Viborg, Denmark

I have had a job since I was 13, and it has taught me an immeasurable amount of skills regarding discipline and work culture.

Technical Skills

This is a non-exhaustive list of keywords that describe my current knowledge base.

Languages	Go, TypeScript, C#, Java, Python, SQL, HTML, CSS
Frameworks	Angular, Vue, .NET, Blazor, HTMX, React, Next.js, Firebase, Node.js, Spring Boot
Technologies	GCP, Docker, Git, CI/CD - GitHub Actions, Firebase, Vercel, Convex, REST, WebSockets, Pub/Sub, Linux, Make/Bash, Networking
Concepts	Microservices, SaaS, Optimization, Authz & Authn, Data processing, System design, SCRUM

Education

2023 – 2025 **M.Sc. in Software Engineering**, *University of Southern Denmark (SDU)*, Odense, Denmark

I have completed my masters thesis in collaboration with Fjernvarme Fyn, developing a Laboratory Information Management System (LIMS) from the ground up, based on their needs. This included gathering information from them, turning it into requirements and finally developing the solution.

2020 – 2023 **B.Sc. in Software Engineering**, *University of Southern Denmark (SDU)*, Odense, Denmark

Bachelor project done in collaboration with Eurisco focusing on industrial data systems. The goal was to automatically and securely update firmware on remote custom hardware.

2016 – 2019 **HTX, Software and Mathematics**, *Viborg Technical High School*, Viborg, Denmark

Graduated with top grades (A+) in Math and Software Development, emphasizing teamwork and practical engineering.

Languages

Danish	Native
English	Fluent

Personal Qualities

Curious, efficient, and dedicated learner, passionate about software architecture and system design.

Strong communicator with proven teamwork and leadership experience.

Enjoy solving technical challenges, automating workflows, and building tools that improve productivity. Challenges such as Advent of Code is exactly the type of events I enjoy.
